

PVA ALFALFA PELLETS

GUARANTEED ANALYSIS

Crude Protein, not less than	18.00%
Crude Fat, not less than.	2.00%
Crude Fiber, not more than.	23.00%

INGREDIENTS: Sun-cured alfalfa and cane molasses.

FEEDING DIRECTIONS: PVA ALFALFA PELLETS can be the sole source of forage in the diet of mature horses, but it is recommended to provide some long stem hay to reduce boredom and stall vices. Introduce PVA ALFALFA PELLETS into the diet by gradually replacing a portion of the long-stem hay over 7-14 day period. PVA ALFALFA PELLETS can be fed at a rate of 1.5 – 2.5% of body weight per day. PVA ALFALFA PELLETS should be soaked in water until properly softened for horses that have not previously been fed forage pellets, horses with dental problems, or horses that consume feed quickly.
